GED Introduces ColorTRU® - A Revolutionary New Decorative Foil Bonding System

Twinsburg, OH (10.07.09) – GED Integrated Solutions' new ColorTRU decorative foil bonding system piqued the interest of dozens of industry leaders when it was showcased for the first time at the recent GlassBuild America Expo. The industry buzz throughout the Show floor was that ColorTRU was "the most innovative product to hit GlassBuild in the last ten years."

This latest equipment from GED is designed to be the most cost effective and production friendly alternative to painting and laminating as the ColorTRU system automatically transfers solid color and wood grain foil to vinyl profiles.

With unlimited graphic, color and design capabilities, ColorTRU's foils are comprised of multiple layers of materials that, unlike vinyl wrap technology, do not interfere in any way with the welding process. The machine automatically transfers the foil, while heat and pressure fuse it to the vinyl profile. This new process ensures no de-lamination, no trimming of excess, an instant cure and parts that can be processed immediately.

Of equal importance, ColorTRU's transfer process also eliminates the need and use of Methyl Ethyl Ketone (MEK) for cleaning. And, because there is no separate adhesive process, there is no mess.

A controlled series of driven rollers process the profile through the machine. Contoured silicone rollers conform the foil to shaped profiles affording a throughput of up to 30 feet per minute.

Its design is modular, thus allowing for additional processing stations to be added sequentially to increase throughput as demand grows. Manufacturers can use a single pass station or multiple foiling stations for processing with quick changeover from profile to profile and color to color in minutes.

As a part of GED's complete line of glass and vinyl window fabrication equipment and software, the ColorTRU decorative foil bonding system is backed by the company's leading training and support services. For more information, contact GED at 330.963.5401 or visit www.gedusa.com.

About GED Integrated Solutions

GED Integrated Solutions is a worldwide supplier of fully integrated insulating glass and vinyl window and door fabrication systems, as well as solar manufacturing equipment, and the pioneer of the revolutionary Intercept i-3 Warm Edge spacer frame production system. The company's i-3 platform works with LeanNet communications software to integrate every facet of a plant's operation, increasing IG quality and production volumes and profits while decreasing operating costs and material wastage. GED's commitment to innovation that addresses its customers' needs is evidenced by the fact that 18 of the top 20 window and door manufacturers utilize GED's equipment and software solutions.
