CMM 2.0™

1

Enhanced Safety Features

Automatic clamping and sequencing, in conjunction with new PSDI (Presence Sensing Device Initiation) light curtain technology, provides higher throughput and a safer operator environment.

2

System Software

Integrated with GED Software for less material waste and more efficient production sequencing.

3

Quick Change Tooling

Capable of punching up to 5 intersections simultaneously, tooling stations take less than 1 minute to change allowing for high capacity while maintaining variability of product.

4

Storage Cabinet

Immediate access to tooling or other critical components, such as grid clips.

5

Cutoff Saw

Optional saw and locked caging for seamless, safer integration into your operation.

6

Optional Infeed Table

Ergonomic, clean method for operator to feed the linear positioner and saw.
